

Blackmore TopCoater

TopCoater and plug tray filler

Growers use the TopCoater for filling plug trays and topcoating

The Blackmore TopCoater is a totally self-contained unit that's ideal for covering seeds in plug trays or directly sown flats. It also may be used to *fill* plug trays. Developed jointly with one of the world's top plug specialists, the Blackmore TopCoater allows infinitely variable control of the speed and volume of media dispensed. The TopCoater, available in both a standard (4 ft) and stretch (7 ft) version, is designed to operate in-line behind any seeding machine. Growers filling plug trays, or covering trays other than in-line with a seeder, will find the stretch version better suited to their needs. The three-foot input conveyor section on the stretch version facilitates manual tray feeding into the TopCoater.

Power - 120 VAC 50/60 Hz [See it in operation on the Blackmore web site movie page!](#)
